Jason J. Chung

jasonchung3003@gmail.com | (720)-257-1998 | LinkedIn: usjchung | Website: jasonchung.me | US Citizen

Education

Carnegie Mellon University — Pittsburgh, PA
Master's Degree in Software Engineering - Scalable Systems | 3.9 GPA — Aug 2024 - Dec 2025
Coursework**:** Designing Software Systems, Computer Vision, Formal Methods, Design Patterns, Quality Assurance

University of Colorado Boulder — Boulder, CO
B.S. in Computer Science | 3.8 GPA — Aug 2021 - May 2024
Coursework**:** Data Structures, Algorithms, Reinforcement Learning, Computer Systems, Operating Systems, Machine Learning

Skills

Backend Development: C, C++, Linux, Python, AWS, Kubernetes, Docker, DevOps | **Web Development:** JS, React, CSS, HTML
Data Storage and Processing: SQL, Oracle, Postgres, MongoDB, Snowflake, Redis | **Project Management:** Git, Jira, Confluence
ML & AL: Natural Language Processing, Neural Networks, GNN, RAG, RLHF | **Others:** Mentorship, Cross-team Communication

Experience

TeleTracking Technologies — Pittsburgh, PA
Forward Deployed Engineer — Jan 2026 - Present
- Leveraged Palantir Foundry and AWS to translate operational workflows into scalable software with hundreds of users.
- Gathered customer requirements, developed full-stack applications, and quickly iterated based on customer feedback.
- Promoted AI-assisted development by sharing practical token cost reduction techniques and multi-agent workflows.

FlightAware — Houston, TX
Software Engineering Intern | Site Reliability Team — May 2025 - Aug 2025
- Designed and deployed a tool that leveraged natural language processing and machine learning to identify software across 500+ servers, improving audit accuracy and reducing technical overhead
- Used observability tools (Prometheus, Grafana) ensuring high availability, fast incident response, and reliable deployments

GHX — Louisville, CO
AI Engineering Intern — May 2024 - Aug 2024
- Developed Python scripts to build a pipeline for ingesting and processing data from millions of healthcare transactions
- Populated graphs using internal and open source datasets, resulting in up to 50 times faster query response times
- Measured performance of network algorithms and graph neural networks, achieving accuracy scores of up to 94%

Laboratory for Atmospheric and Space Physics — Boulder, CO
Software Development Intern — Feb 2023 - May 2023
- Deployed an internal web application with a REST API to reduce latency by 85% for hundreds of crucial databases
- Automated tasks for databases ingesting telemetry data from satellites, enhancing usability for scientific researchers

Projects

Sharkedu — Jan 2025 - Feb 2025
- Collaborated with students during TartanHacks 2025 to design and deploy an educational full-stack web application
- Incorporated LLM functionality into the backend, enabling AI-assisted learning with built-in human oversight

Rain in Australia — Jan 2024 - May 2024
- Built Fully-connected and Long-Short Term Memory Neural Networks to predict rainfall in Australia with 85% accuracy
- Conducted exploratory data analysis of time series data using Python and its libraries (PyTorch, Matplotlib, scikit)

Character Device Driver — Jan 2024 - May 2024
- Created a character device driver using a shared buffer in C for a linux operating system
- Implemented and tested different driver functionalities, including open, close, read, write, and seek operations

Activities and Leadership

Carnegie Mellon University — Pittsburgh, PA
Teaching Assistant for Quality Assurance, TartanHacks, Carnegie AI Safety Initiative (CASI) — Aug 2024 - Present

University of Colorado Boulder — Boulder, CO
Course Assistant for Software Dev, HackCU (hackathon), Quantum Computing Club — Aug 2021 - May 2024
