Education

Carnegie Mellon University Pittsburgh, PA
Master of Software Engineering - Scalable Systems Dec 2025

University of Colorado Boulder Boulder, CO
Bachelor of Science in Computer Science, GPA: 3.8/4.0 May 2024
Coursework: Machine Learning, Object-Oriented Design, Software Development, Computer Systems, Operating Systems
Extracurriculars: Society of Asian Scientists and Engineers, Quantum Computing Club, Hack CU (hackathon)

Skills

Languages: C, C++, Bash, Python, Javascript, Java, HTML, CSS, SQL, Scala

Software Tools: Amazon Web Services, git, Jira, Confluence, Docker, Linux, gdb, Makefile, Microsoft Office

Experience

GHX Louisville, CO
AI Engineering Intern May 2024 - Aug 2024

- Created a pipeline to ingest and clean healthcare exchange data from cloud-based relational databases into graph databases, enhancing query performance and scalability for millions of data entries.
- Conducted exploratory research to compare performance of network algorithms and graph neural networks, highlighting advantages and limitations of integrating these methods with healthcare data.

University of Colorado Boulder Boulder, CO
Course Assistant | CSEL Ambassador Jan 2024 - May 2024

- Held office hours for a software development class (CSCI 3308) to help students better understand class material.
- Managed Computer Science Education Lab operations, including room reservations and event scheduling.

Transamerica Denver, CO
Software Engineering Intern May 2023 - June 2023

- Updated outdated software architectures including cloud services (AWS), servers, and databases to increase efficiency of ETL pipelines and CI/CD workflows.

Laboratory for Atmospheric and Space Physics Boulder, CO
Software Development Intern Feb 2023 - May 2023

- Automated creation, querying, and validation of databases storing several terabytes worth of satellite data utilizing bash scripting, increasing database management capabilities.
- Deployed a web application that facilitated seamless database development using a REST API, received positive feedback for improving developer efficiency.

CU Office of Information Technology Boulder, CO
IT Service Center Analyst Feb 2022 - Feb 2023

- Provided comprehensive IT support to CU Boulder students, faculty, and staff, received positive feedback.
- Engineered a Javascript tool to automate ticket data entry from Excel sheets, cutting analyst workload by roughly 70%.

Projects

Rain in Australia

- Built Fully-connected and Long-Short Term Memory Neural Networks to predict rainfall in Australia with 85% accuracy.
- Utilized Python and Jupyter Notebook to analyze, clean, and extrapolate time-series data.

Character Device Driver

- Created a character device driver using a shared buffer in C for a linux operating system.
- Implemented and tested different driver functionalities, including open, close, read, write, and seek operations.

RecipEat

- Led a team of students to collaboratively build a full-stack web application meant to make cooking more accessible.
- Developed a feature to filter recipes from an API based on dietary restrictions and available ingredients, enhancing user experience and personalization.
